

Marko Mitrović

Software Engineer | Full-Stack & Legacy Modernization Specialist

makimitrovic07@gmail.com | [LinkedIn](#) | [GitHub](#)

Technical Focus: PHP, Java, Spring Boot, React, Flutter, Oracle SQL, MariaDB (MySQL), SSH Deployment

“Pragmatic Software Engineer specializing in the modernization of large-scale retail ecosystems and enterprise-grade systems. Expert in executing multi-track architectural migrations, transitioning complex legacy environments to unified Java and modern PHP platforms with a zero-downtime objective. Proven track record in maintaining high-traffic infrastructure where system availability and data integrity are non-negotiable. Skilled in architecting robust integration layers (SAP, PowerBI, E-commerce APIs) and aligning technical infrastructure with rigorous regulatory and audit standards.”

TECHNICAL SKILLS

- **Programming Languages:** Java, PHP, SQL (PL/SQL), Dart, JavaScript.
- **Frameworks & Ecosystems:** Spring Boot (JPA, Security), Flutter, React, Node.js.
- **Databases & Data Architecture:**
 - **Relational:** Oracle (Performance Tuning & Data Integrity), MariaDB, MySQL.
 - **NoSQL & Cache:** Redis, MongoDB, Cassandra, Neo4j (Graph Database).
- **Enterprise Integrations:** SAP ERP (RESTful API), Enterprise Data Pipelines, PowerBI Analytics, Last-mile delivery orchestration (Glovo, Wolt).
- **Cloud & DevOps:** Microsoft Azure, Docker, GitHub Copilot, Nginx, Apache, CI/CD workflows, Linux (Server Administration).
- **Systems Engineering:** Distributed Locking, Audit Logging Systems, Regulatory Compliance, High-Availability Design, System Hardening.

PROFESSIONAL EXPERIENCE

Software Engineer | Univerexport DOO, Novi Sad (December 2023 - August 2026)

Key Focus: Leading multi-track architectural migration, enterprise-scale integrations, and system compliance.

- **Legacy Modernization & Dual-Stack Evolution (PHP & Java):** Executing a 3-track strategic transition from legacy modules to modern, stable PHP environments, React frontend, and a unified Spring Boot platform, ensuring strict zero-downtime continuity under peak production load.
- **Distributed Locking & Concurrency:** Engineered a custom cross-platform locking mechanism to resolve race conditions and synchronize state seamlessly across mobile, web, and backend nodes.
- **Enterprise Integrations, Database Architecture & Data Pipelines:** Built secure integration layers for ERP systems, factoring platforms, and last-mile delivery networks. Designed and maintained complex transactional databases, alongside automated ETL pipelines featuring multi-layered schema validation and integrity checks.
- **Internal Tooling & Backend Standardization:** Designed modular developer tools, including a Spring Reflection-driven reporting engine, strongly-typed fluent query criteria filtering, and a unified API response architecture.
- **Compliance, Security & Performance:** Enforced Principle of Least Privilege (PoLP), advanced telemetry logging, and optimized cross-instance data flow in distributed environments.
- **Mobile & Industrial Solutions:** Acted as Lead Architect for official cross-platform mobile apps (iOS/Android) and deployed specialized warehouse logistics software for industrial PDA hardware.

PROFESSIONAL INTERNSHIPS

DevOps Intern | Levi9, Novi Sad (May 2023 - June 2023)

- **Infrastructure & IaC:** Provisioned cloud resources on Microsoft Azure using Terraform and participated in CI/CD pipeline automation within Azure DevOps.
- **Automation & Scrum:** Utilized PowerShell for routine task automation and operated within an agile Scrum team environment.

Software Developer Intern | Xcentric IT, Novi Sad (August 2022 - September 2022)

- **Migration & Full-Stack:** Spearheaded the transition of an internal project from Firebase to a Laravel backend, modernizing the frontend with Tailwind CSS and ensuring strict SQL database integrity.

ACADEMIC FOUNDATION & KEY PERSONAL PROJECTS

- **Faculty of Technical Sciences (FTN), Novi Sad** – Software and Information Technologies
- **SaleTrackMate (SaaS Invoice Management):** Architected a high-performance invoice lifecycle system featuring UBL 2.1 (XML) export modules for government e-invoicing (SEF) standards, automated PDF generation, and a multi-tier RBAC security model.
- **Distributed eGovernment SSO:** Contributed to a microservices mesh utilizing Golang for a custom Single Sign-On authentication service across judicial and law enforcement modules.
- **Polyglot Social Media Engine:** Implemented polyglot persistence utilizing MongoDB (Users), Redis (Caching), Cassandra (Feeds), and Neo4j (Social Graphs).
- **Gym Management System (Spring Boot & MVC):** Developed a full-stack portal with custom JDBC-based ORM logic for session booking, SSR Thymeleaf views, and loyalty tracking.

LANGUAGES & INTERESTS

- **Linguistic Proficiency:** Serbian (Native), English (B1/B2 – Professional technical communication and architectural documentation).
- **Engineering Mindset:** Prioritizing quality, auditable code, and architectural resilience over pure volume.
- **Interests:** Algorithmic pattern recognition through competitive chess, cycling, and long-term system design.
